Configuring a GRE Tunnel over IPsec with OSPF

Document ID: 14381

Introduction

Normal IP Security (IPsec) configurations cannot transfer routing protocols, such as Enhanced Interior Gateway Routing Protocol (EIGRP) and Open Shortest Path First (OSPF), or non−IP traffic, such as Internetwork Packet Exchange (IPX) and AppleTalk. This document illustrates how to route between different networks that use a routing protocol and non−IP traffic with IPsec. This example uses generic routing encapsulation (GRE) in order to accomplish routing between the different networks.

Refer to PIX/ASA 7.x and later : VPN/IPsec with OSPF Configuration Example for more information on how to configure for a VPN/IPsec with Open Shortest Path First (OSPF) without a GRE tunnel on Cisco PIX Security Appliance Software Version 7.x or Cisco Adaptive Security Appliance (ASA).

Refer to Configuring IPsec Router−to−Router Hub and Spoke with Communication Between the Spokes for information on how to configure a hub and spoke IPsec design between three routers.

Refer to Configuring Router−to−Router IPSec (Pre−shared Keys) on GRE Tunnel with IOS Firewall and NAT for information on how to configure the basic Cisco IOS® Firewall configuration on a GRE tunnel with Network Address Translation (NAT).

Prerequisites

Requirements

Ensure that you meet these requirements before you attempt this configuration:

- Make sure that the tunnel works before you apply the crypto maps.
- Refer to Adjusting IP MTU, TCP MSS, and PMTUD on Windows and Sun Systems for information about possible Maximum Transmission Unit (MTU) issues.

Components Used

The information in this document is based on these software and hardware versions:

- Cisco 3600 that runs Cisco IOS Software Release 12.4(8)

- Cisco 2600 that runs Cisco IOS Software Release 12.4(8)
- PIX Firewall (Lion) Software Release 6.3(5)
- PIX Firewall (Tiger) Software Release 6.3(5)

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

Configure

In this section, you are presented with the information used to configure the features described in this document.

Note: Use the Command Lookup Tool (registered customers only) to find more information on the commands used in this document.

Network Diagram

This document uses this network setup:

Router to Router GRE Tunnel
Note: The IP addressing schemes used in this configuration are not legally routable on the Internet. These are RFC 1918 addresses which have been used in a lab environment.

Note: Crypto does not support the Cisco 7600 Series Router. You may have to install the VPN module in order for this to work.

Configurations

This document uses these configurations:

- PIX Lion
- PIX Tiger
- Router Rodney
- Router House

Verify

There is currently no verification procedure available for this configuration.

Troubleshoot

This section provides information you can use to troubleshoot your configuration.

Refer to Troubleshooting the PIX to Pass Data Traffic on an Established IPSec Tunnel for additional information on troubleshooting a PIX and IPsec tunnel.

Troubleshooting Commands

The Output Interpreter Tool (registered customers only) (OIT) supports certain **show** commands. Use the OIT to view an analysis of **show** command output.

Note: Refer to Important Information on Debug Commands before you use **debug** commands.

PIX IPsec Good Debug

- **show crypto isakmp sa** Shows the Internet Security Association Management Protocol (ISAKMP) Security Association (SA) built between peers.

    ```
    Lion#show crypto isakmp sa
    Total : 1
    Embryonic : 0
    dst src state pending created
    10.65.10.15 10.64.10.16 QM_IDLE 0 1

    Tiger#show crypto isakmp sa
    Total SAs : 1
    Embryonic : 0
    dst src state pending created
    10.65.10.15 10.64.10.16 QM_IDLE 0 1
    ```
- **show crypto engine connection active** Shows each Phase 2 SA built and the amount of traffic sent.

    ```
    Lion#show crypto engine connection active
    Crypto Engine Connection Map:
    size = 8, free = 6, used = 2, active = 2

    Tiger#show crypto engine connection active
    Crypto Engine Connection Map:
    size = 8, free = 6, used = 2, active = 2
    ```
- **show debug** Displays the debug output.

    ```
    Lion#show debug
    debug crypto ipsec
    debug crypto isakmp
    debug crypto engine
    crypto_isakmp_process_block: src 10.65.10.15, dest 10.64.10.16
    OAK_MM exchange
    ```
